## **CMT Exhibits at the Florida Chiropractic National Convention and Expo**

CMT demonstrated its Vehicle Seat Multi-Position Software technology at the Florida Chiropractic National Convention and Expo. Held at the Gaylord Palms Resort & Convention Center, August 21st - 24th, the convention and expo is the single largest chiropractic association gathering in the country with over 2,600 doctors and other related fields of expertise in attendance.

Demonstrated in a red 2008 Cadillac CTS, CMT attended the expo to gain valuable feedback from the doctors on its software technology. The response to CMT's technology was overwhelmingly positive. Several doctors referred to CMT's technology as a **"Best of Show Product"** and stated they would recommend it to their patients with lower back issues. Dr. Paul Phipps, President of Comfort Motion Technologies, stated, "It is very heartening to see the chiropractic industry's positive response to our Vehicle Seat Multi-Position Software."

CMT's Vehicle Seat Multi-Position Software enhances the ergonomic value and function of existing power seat applications and automates subtle changes in the seat position, redistributing the occupant's weight. This reduces the occupant's stress load and relieves the pain caused by muscle fatigue and compression.

Based in Anderson, Indiana, Comfort Motion Technology's mission is "Enhancing People's Lifestyles Through Innovative Technology."
